We are seeking a suitable candidate for our head office in Pune, India:

Software Deployment Engineer

Job Description:

We are looking for a hands-on MECM/SCCM professional with 5–7 years of relevant experience

The ideal candidate should:

- Have a strong technical foundation in MECM/SCCM and be comfortable working directly on deployments, task sequences, packages, patches, and troubleshooting
- Be able to independently analyse deployment failures using MECM and Windows logs and identify the root cause
- Have experience managing deployments across a large number of Windows systems and multiple locations
- Be systematic, detail-oriented, and disciplined in following deployment and change procedures
- Demonstrate ownership and accountability for assigned activities
- Be comfortable coordinating with local IT administrators and other technical teams
- Have good interpersonal skills and communicate effectively with people at different technical levels
- Be a collaborative team player who is willing to support colleagues when required
- Be comfortable working independently while escalating issues appropriately when necessary
- Have a continuous-improvement mindset and look for opportunities to automate and simplify repetitive activities
- Be dependable and interested in building a long-term association/assignment, rather than looking for a short-term engagement
- Be willing to work in a structured, process-oriented environment

Qualifications:

Essential:

- **5–7 years of relevant hands-on experience** in Microsoft Endpoint Configuration Manager (MECM/SCCM)
- Strong practical experience in **software/application deployment using MECM**
- Hands-on experience in **Windows Operating System Deployment (OSD)**, experience in creating, configuring, testing, and troubleshooting MECM Task Sequences
- Experience in **software packaging and application deployment for Windows clients and servers**
- Strong experience in **analyzing and resolving installation and uninstallation failures**

- Good knowledge of **MECM deployment logs and troubleshooting techniques**
- Experience in **patch management and Windows update deployment**
- Experience with **third-party application patching**
- Experience in **creating and maintaining PowerShell or other automation scripts** for software installation/configuration
- Experience in **second-level troubleshooting** of Windows clients, drivers, applications, and deployment-related issues
- Experience **supporting distributed IT environments** / multiple locations.
- Ability to work with **MECM infrastructure** including distribution points, repositories, databases, and servers
- Good understanding of **Windows client and server administration**
- Demonstrated ability to work as a team player and take ownership of assigned responsibilities
- Willingness and interest to work on a long-term assignment

Desirable:

- Microsoft certifications related to MECM/SCCM, Intune, Windows Server, or Endpoint Administration.
- Experience with Microsoft Intune / Microsoft Endpoint Manager.
- Experience with Windows Autopilot.
- Experience with Active Directory, Group Policy, DNS, DHCP, and related Microsoft infrastructure.
- Experience with WSUS and integration with MECM.
- Knowledge of SQL Server/database troubleshooting related to MECM.
- Experience with PowerShell automation beyond basic deployment scripts.
- Experience with application repackaging and deployment technologies such as MSI, MST, App-V, or similar.
- Experience with driver management and driver packages.
- Experience in managing large-scale software rollouts.
- Experience supporting multiple geographical locations / international IT environments.
- Knowledge of ITIL-based incidents, problems, and change-management processes.
- Experience in preparing technical documentation, SOPs, deployment guides, and troubleshooting instructions.
